

DIYORBEBK RASULOV

Buffalo, NY | diyorbek@buffalo.edu | (929) 373-9123 | github.com/diyorbekrasulov | diyorbekrasulov.github.io

Computer Science senior at the University at Buffalo with strong programming skills in **C and Java** and a track record of leading small teams to ship working software. Comfortable in **Linux/Ubuntu** environments — writing tested code with Criterion, resolving Git merge conflicts, reading technical documentation, and using AI tools to ramp quickly on unfamiliar problems.

EDUCATION

University at Buffalo (SUNY) — B.S. in Computer Science

Expected May 2027

Buffalo, NY

Relevant Coursework: Data Structures, Algorithms, Systems Programming (C / Assembly), Programming Languages (OCaml)

TECHNICAL SKILLS

Languages: C, Java, Python, JavaScript, C#, OCaml, HTML, CSS, Assembly

Developer Tools: Git & GitHub (branching, pull requests, merge-conflict resolution, code review), Linux/Unix terminal (Ubuntu), VS Code, IntelliJ, Eclipse, Unity, Arduino

Testing & Practices: Criterion unit testing, debugging, technical documentation, AI-assisted development, Agile/async collaboration

Spoken Languages: English, Russian, Tajik

PROJECTS

Interactive OCaml Learning Platform — Team Project

OCaml · Criterion · Git

- Built an interactive, Quizlet-style platform for teaching OCaml through guided lessons and hands-on practice exercises.
- Wrote most of the application logic and built Criterion test suites to verify correctness across modules.
- Owned the team's Git workflow: led code reviews, managed pull requests, and resolved merge conflicts to keep the codebase stable.
- Kept the team on schedule, coordinated task ownership, and presented the finished project to the class.

Steganography Web Application — Team Project

JavaScript · HTML · CSS · Git

- Built a web app that hides secret messages inside user-uploaded images and files by altering least-significant bits.
- Designed a custom feature that lets users define their own bit-encoding sequence — enabling layered messages concealed within other hidden messages.
- Implemented multiple decode modes: a standard decoder plus an exploratory mode for testing sequences to recover nested messages.
- Managed the team's version control — branching, merging, conflict resolution — and drove most of the implementation.

Freelance Web Development — Personal & Client Sites

May 2025 – Present

HTML, CSS, JavaScript, Git/GitHub

- Designing and building a personal portfolio site (diyorbekrasulov.github.io) to showcase projects (in progress).
- Built fully customized, responsive websites for 4–5 clients, each with an interactive contact feature so visitors can message them directly.
- Scoped each project in client meetings, built layout scaffolds for approval, then delivered the final site.
- Managed all source code on GitHub using feature branches and pull requests.

Autonomous Quadcopter

Python · Raspberry Pi

- Helped design and build an autonomous quadcopter integrating GPS, IMU, and ultrasonic sensors on a Raspberry Pi.
- Programmed flight behavior in Python (DroneKit) for waypoint navigation and obstacle avoidance, debugging hardware/software integration from the Linux terminal.

2D Survival Game

Java

- Building a 2D survival/adventure game in Java from scratch, with AI-assisted procedural level generation.

EXPERIENCE

After-School Counselor — CommonPoint Queens

2022 – 2025

Queens, NY

- Tutored and mentored students across subjects, adapting explanations to each student's learning style.
- Worked full-time in high school, then returned each college summer, alongside full-time coursework.
